Codes And Ciphers A History

Cryptography, the use of codes and ciphers to protect secrets, began thousands of years ago. Until recent decades, it has been the story of what might be called classic cryptography — that is, of methods of encryption that use pen and paper, or perhaps simple mechanical aids. In the early 20th century, the invention of complex mechanical and electromechanical machines, such as the Enigma rotor machine, provided more sophisticated and efficient means of encryption; and the subsequent ...

A code involves simple translation. "ABC" is code for "Hello There!" A cipher is like a mathematical function, you input something and get an output. I input "ABC" into the cipher and it outputs "Hello There!". Code is more direct, you just look up what something means. A cipher is a way of translating the code without having everything listed out.
