Histopathology of blistering diseases : with clinical ...

Dealing with the histopathology of blistering diseases, this textbook covers the clinical features, the immunofluorescence, and the electron microscopic findings. It is supplemented by selected references and encompasses the various discoveries, which occurred over the years concerning the molecular etiology of these diseases.

Histopathology of blistering diseases : with clinical ...

The histology of herpes infections is very distinctive. The low power pattern of a typical lesion is of an intraepidermal blister (Figure 1). The key feature is acantholysis with solitary keratinocytes within the blister cavity (Figures 1,2,3). Keratinocytes will show nuclear changes in viral infection.

Pemphigoid - Wikipedia

Early (precirrhotic) stage: Macrovesicular steatosis (Figure 23.1, Figure 23.2) is an early event in WD and may even be the only morphologic feature seen in the biopsy; exceptions are the presentation as classic Wilsonian acute liver failure or late stages of severe acute hepatitis, in which steatosis is usually absent.Other hepatocellular abnormalities include slight or moderate ...

Histopathology of Wilson Disease - ScienceDirect

Acute blistering diseases can be generalised or localised to one body site and are due to infection or inflammatory disorders. Although most commonly eczematous, generalised acute blistering diseases can be life-threatening and often necessitate hospitalisation.

Blistering skin conditions | DermNet NZ

blisters and secondary painful erosions are the clinical hallmark of autoimmune bullous disorders. Histopathology reveals the location of blister formation and helps to classify the subtype of the bullous skin disorder. Immunofluorescence is crucial for diagnosing autoimmune bullous skin disorders. Tissue-bound

Autoimmune bullous disorders.

In December 2019, an outbreak of severe acute respiratory syndrome associated to SARS-CoV2 was reported in Wuhan, China. To date, little is known on histopathological findings in patients infected with the new SARS-CoV2. Lung histopathology shows features of acute and organising diffuse alveolar damage. Subtle cellular inflammatory infiltrate has been found in line with the cytokine storm theory.
