### Ion Chromatography in Environmental Analysis - AWE ...

Ion chromatography (IC) is a subset of liquid chromatography applied to the determination of ionic solutes, such as inorganic anions, cations, transition metals, and low-molecular-weight organic acids and bases. Although these solutes can be analyzed using a number of separation and detection modes, ion-exchange is the primary separation mode and suppressed conductivity is the primary method of detection in IC.

Ion interaction chromatography is a mode of IC which has been used widely for the separation of small ions in both forensic and environmental applications, for many years. Also known as ion-pair chromatography, it works on the basis of an interaction between charged analytes and an oppositely charged ion interaction reagent (IIR) ion bearing a hydrophobic moiety, which in turn retains on a non-polar stationary phase such as octadecyl-functionalised silica.
